

Access

I can reliably replace the gate-keeper. After fitting the access and identification devices, in addition to the normal access systems and online functions, I will evaluate the eligibility of access according to the set date, time, person, workplace, role, center, completed OSH training or alcohol test. I guarantee that no employee will ever lose their keys again.

And more:

- I record every entrance and I know about every open door
- I open and control devices, machines and lighting via mobile phone or computer from anywhere in the world
- I automatically open the driveway for vehicles with a recognized license plate and take a photo of the vehicle and the cargo
- I inform people with set subscriptions about events
- I submit a transit event record according to the selected license plate and display the date, time, transit photo and cargo photo for the period you specified
- I automatically open workplaces or areas in crisis situations
- I close and lock automatically in desired situations, such as engaging the security alarm
- I weigh vehicles on arrival and departure and calculate the difference. I evaluate and grant or deny the right of entry or exit based on the weight difference. I inform the responsible person online.
- I calculate the weight of the material transported or withdrawn in the given period

We will connect all your workplaces worldwide into one unit

Your work will get a whole new dimension, and you will decide what specific information you want to receive. You will be able to have a continuous overview of all the events at the workplace as well as be able to influence them 24/7/365 from one location.
