

Cameras

I make your workplace safer. I provide a general overview of remote events, address the area of interest, detect unauthorized intrusions and monitor protective zones or entrances. I urgently appeal to any intruders in the area through the loudspeaker. I make a photographic documentation of the workplace for later use, immediately notify the responsible person of the situation and store all the data safely.

And more:

- I watch the specified areas of interest in terms of security, fluency, warehouse and other risks
- I broadcast a recording you created at a set interval via the loudspeaker in case of an event
- I create a record of the event
- I inform people with set subscriptions about the event
- I allow you to connect to the speaker from a computer or phone online from anywhere in the world
- I am authorized to communicate with the central security desk
- I take photos of the workplace at set intervals
- I make records available only to authorized personnel, workplace supervisors and centers

We will connect all your workplaces worldwide into one unit

Your work will get a whole new dimension, and you will decide what specific information you want to receive. You will be able to have a continuous overview of all the events at the workplace as well as be able to influence them 24/7/365 from one location.
