

Warehouse

I keep track of tool location in all your workplaces and beyond, record tool transfers between workers, and require confirmation of tool acceptance by a worker. You do not need to interfere with your tools to start using the module. I will show you an overview of all your tools, including their history. By fitting tools with IB tags I can confidently monitor in which warehouse or with whom the tool is located. You can see the efficiency of the use of individual tools, including their wear.

And more:

- I oversee the authorization of tool dispensing
- I infallibly identify tools using QR code
- I report on-site events associated with borrowed items
- I inform the responsible persons in case of a threat to work safety, for example in case of the first aid kit or defibrillator being removed from the warehouse
- I continuously display tool location information

We will connect all your workplaces worldwide into one unit

Your work will get a whole new dimension, and you will decide what specific information you want to receive. You will be able to have a continuous overview of all the events at the workplace as well as be able to influence them 24/7/365 from one location.
