

Vehicles

I manage your vehicle fleet efficiently and I am essential for the operation of my other modules, such as the motor fuel and GPS module. In one place, I will show you a perfect overview of the operation of an already costly process and greatly simplify your administration, eliminate paperwork and secure data against manipulation. I offer online evaluation of vehicle entry authorization according to the set date, time, workplace, person - driver, his role, center, completed OSH training or alcohol test.

And more:

- I automatically identify the vehicle using a license plate, card or chip
- I approve and record fuel use by an authorized person, including immediate evaluation of fuel consumption
- I can set limits for pumping the maximum amount of fuel into a selected vehicle
- I create an online performance report and statistics of the vehicle's work done at the workplace
- I submit reports to supervisors for authorization and approval, which can be used immediately as a basis for invoicing
- I immediately calculate the cost of the work done by vehicles at the workplace in the selected period

We will connect all your workplaces worldwide into one unit

Your work will get a whole new dimension, and you will decide what specific information you want to receive. You will be able to have a continuous overview of all the events at the workplace as well as be able to influence them 24/7/365 from one location.
