

## Motor fuel

I clearly group all your filling stations from the smallest tanks, such as power generators, to large-capacity gas tanks. I give you an online overview of the current status of the levels in each tank and allow you to significantly streamline the logistics of supplying all your tanks. I provide access to the information online and automatically inform you of the predefined limit state, stop fuel dispensing if so set, or automatically stop the engine when the fuel tank is running low.

## And more:

- I will only give fuel to authorized personnel
- I authorize and measure the dispensing of any liquids (fuel, AdBlue, water, etc.)
- I require the worker to enter the mileage and hour information of the vehicle when refuelling
- I allow an authorized person to remotely initiate the refuelling process for any worker through an app

## We will connect all your workplaces worldwide into one unit

Your work will get a whole new dimension, and you will decide what specific information you want to receive. You will be able to have a continuous overview of all the events at the workplace as well as be able to influence them 24/7/365 from one location.
